

Harness the power of the sun

Heatseeker Diamond Pool Covers & Roller Systems

Helping you have energy and water around the pool.

Solar pool covers are a must-have addition to your swimming pool or spa. Once you have heated your pool, the best way to ensure the heat stays there all year round is with a solar cover.

Pool covers are without a doubt one of the great inventions in pool technology. Our innovative, diamond-shaped bubble solar cover will increase heat retention, eliminate evaporation completely and reduce running costs in terms of maintenance and pool chemical consumption. Our solar covers will also dramatically reduce the amount of dust and general debris that gets into your pool.

Our Innovation. Your Lifestyle.

Harness the power of the sun

Water Savings

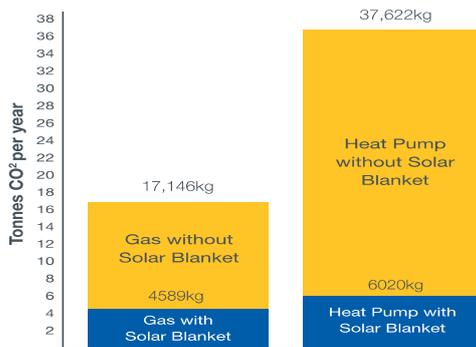

Reduce water evaporation by up to 97%, which provides water savings of approximately 50,000-70,000 litres per year depending on where you are situated in Australia.

City	Annual Evaporation per m ²	Evaporation per m ² per day	Annual Water Savings
Melbourne	1400mm	3.9mm	50,400L
Sydney	1600mm	4.5mm	57,600L
Brisbane	1700mm	4.8mm	61,200L
Adelaide	1800mm	5.1mm	64,800L
Perth	2000mm	5.6mm	72,000L

Figures are based on Bureau of Meteorology annual evaporation rates of an outdoor pool with a 40m² surface area. Pool cover - 90% water saving.

Energy Savings

The Diamond-shaped bubble allows for closer spacing and therefore increases heat retention by up to 75% reducing CO² emissions and saving on energy normally used to run auxiliary heating systems.

Graph is based on data and figures from "pool heat" simulation program. Pool in Sydney heated to 28°C year round. CO² Coefficient 1.381kg/kwh - electricity 0.055kg/Mj - gas

Cost Savings

By conserving your pools water you will also reduce chemical consumption by 50-70%. By reducing your pools water and chemical evaporation losses, together with saving on energy bills, a Heatseeker Diamond solar cover will minimise the expenses associated with maintaining your pool.

Added Benefits

- Reduce the amount of dust and general debris entering your pool.
- Increase your pool temperature by up to 8°C.

Diamond Bubble Range

Innovative Design Breakthrough
The Diamond-shaped bubble allows for closer spacing and therefore greater insulation.

14.6% Greater Heat Retention Than Original Round Bubble

Available in 400 Micron, 500 Micron and 600 Micron.

Green available in 500 Micron only.

400 Micron - 3 year full replacement warranty with 2 year pro rata

500 Micron - 3 year full replacement warranty with 5 year pro rata

600 Micron - 3 year full replacement warranty with 7 year pro rata

Heatseeker Diamond Space Age Bubble

The Space Age (silver/aluminum heat shield) still allows the collection of heat from the sun's rays and reflects otherwise lost heat back into the pool.

Supreme Heating's innovative range of Heatseeker Diamond-shaped bubble covers will ensure your pool or spa meets modern day ecological requirements.

Stainless Steel Roller

Supreme Heating's Roller is made from a stainless steel frame and then powder coated for added protection in Coastal regions. It comes with a wheel, handle and brake to ensure your cover is easy to wind on/off. The heavy duty castor wheels allow for full mobility and the ease to store away from the pool if necessary. Each roller has a protective sun cover and fully adjustable strap system to fix to the cover.

The low profile frame system is ideal for applications where height is restricted i.e. where roller is placed in an enclosed area/box.

A motorisation option is also available. The remote-controlled motors are fitted inside the roller tube and therefore concealed. They do not require any additional space outside of the roller system. Motorisation kits are supplied with a remote control and charging unit.

Supreme Heating's range of rollers are compact, portable and are a great investment and addition to your pool.

Model	Tube Size*	Max Width	Max Pool Size	Motorisation Option
SR2H	85-90mm	5.0m	50m ²	Yes (SR2M)
SR3H	105-110mm	6.5m	75m ²	Yes (SR3M)
SR4H	125-130mm	8.0m	100m ²	No

*telescopic-inner and outer tube diameters

Micron or UM =Wall thickness of cover material.

*Save water and money

To promote water conservation, some state and local governments offer a rebate of up to \$200 on the purchase of pool covers. Please contact Supreme Heating or your local distributor to find out whether you are eligible for a rebate.
